

Figure 10. Distribution of predicted average annual water levels in SJMCA for the 57 years from 1942 to 1998. The lowest, second lowest, middle, second highest and highest box points represent the 10th percentile, 25th percentile, median, 75th percentile, and 90th percentile, respectively. Mean water levels are represented by the solid square. Dashed lines represent the average ground elevation along each transect.
